### ***Sonata.***

A sonata is a type of musical composition for one instrument, either alone or accompanied by a piano. Modern sonatas are cast in several large sections called movements, although many are in one movement only. The sonata is the single most important form in classical music, because its shape and structure have been borrowed by other types of composition, such as the concerto and the symphony.

The word “sonata” comes from the Italian verb “sonare”, meaning “to sound”. The term was first used by the Italians at the start of the 17<sup>th</sup> century or earlier, when the first Baroque instrumental compositions were being written. Two types of sonata became common: the chamber sonata and the church sonata. Both were in several movements and both were for violins accompanied by cello and keyboard. The chamber sonata was cast in movements based on dance rhythms and used a harpsichord as its keyboard instrument, while the church sonata was more serious in style, more suitable for a religious ceremony, and generally used an organ. Purcell, Johann Sebastian Bach, and Handel wrote sonatas of this sort.

In the late 17<sup>th</sup> century, the German composer Johann Kuhnau was the first to write sonatas for the solo harpsichord. These were in several movements and set the pattern for future developments in the form. In the late 18<sup>th</sup> century, the sonata began to emerge as we know it today with the invention of the piano. The greatest influences on its development came from Carl Philipp Emanuel Bach and his brother Johann Christian Bach.
